
Are You at Risk for ORAL CANCER?

ViziLite

Our practice continually strives to be at the forefront of obtaining current technology and making it available to our patients. A new medical advancement in detection of abnormalities in oral tissues has given us the opportunity to identify, evaluate, and monitor suspicious areas of the mouth. These suspicious areas could be pre-cancerous tissues. Using ViziLite, allows us to do a more thorough exam and screening for pre-cancerous tissues early, so if need be, intervention can start early.

This technology is the only FDA-cleared device for the identification and monitoring of oral abnormalities that could lead to cancer.

The exam is easy and painless, but so important to early detection of abnormal tissue. It entails the patient rinsing with a special mouthwash and the doctor observing and examining the oral tissues with the ViziLite device.

If you are at risk for oral cancer, we highly recommend that you have the ViziLite screening exam done.

There is a fee of \$58.00 for the ViziLite screening exam.

This exam may not be covered by your insurance.

The American Dental Association with procedure code 0431 recognizes ViziLite.

YES – I AUTHORIZE THE CLINICIAN TO USE *ViziLite* ALONG WITH THE STANDARD ORAL CANCER EXAMINATION. I accept financial responsibility for this enhanced examination.

NO – I PREFER TO NOT HAVE THE VIZILITE EXAMINATION AT THIS TIME.
